FIB – SOL Life Technologies Private Limited

Founder: Kavitha Sairam

Focus Area: Agricultural Inputs & Biotechnology

Website: <https://www.fibsol.com/>

Email: kavithafibsol@gmail.com

Mobile: 9138111855

Foundation Year: 2013

Location: Tamil Nadu

Incubated in: 2021-22 at IARI

To encapsulate and stabilize soil microbes, the startup Fib-Sol has developed products that are tailor-made formulations available as gel, crop-specific combos, and kitchen garden combos.

Depending on the crops' nutritional needs and soil composition, these unique microbial formulations encapsulated with soil bacteria are suitable for a variety of crops. These microorganisms mobilize potassium (K), solubilize phosphorous (P), and fix nitrogen. The usage of these formulations saw a reduction in the use of chemical application and an increase in yield.

The Fib-Sol range of products includes: AgriGels, NPK Combos, Immune Booster, Fertilizer Carrying Membranes (FCM), etc.
