**Incubated in:** 2020-21 at IARI

Inbreeding of goats causes unhealthy offspring with genetic defects and limited access to alternative healthy breeds.

To address this problem, the startup “Aegipan Animal Biocare” is providing artificial insemination (AI) services of indigenous goat breeds at a large scale for breeding healthy offspring, preserving good germplasm, and improving farmers income.

The startup has also signed a MoU with the ICAR Central Institute for Research on Goats for the development of new breeding technology, grading up of Bengal goats, and employment generation with the introduction of AI.

The large-scale artificial insemination efforts for indigenous goat breeds have bolstered local economies and elevated farmers income. The improved genetics lead to healthier herds. Additionally, the initiative aids biodiversity by preserving local breeds and reducing environmental strain through better adaptation.
